

“We change with the changing needs of students and society”.

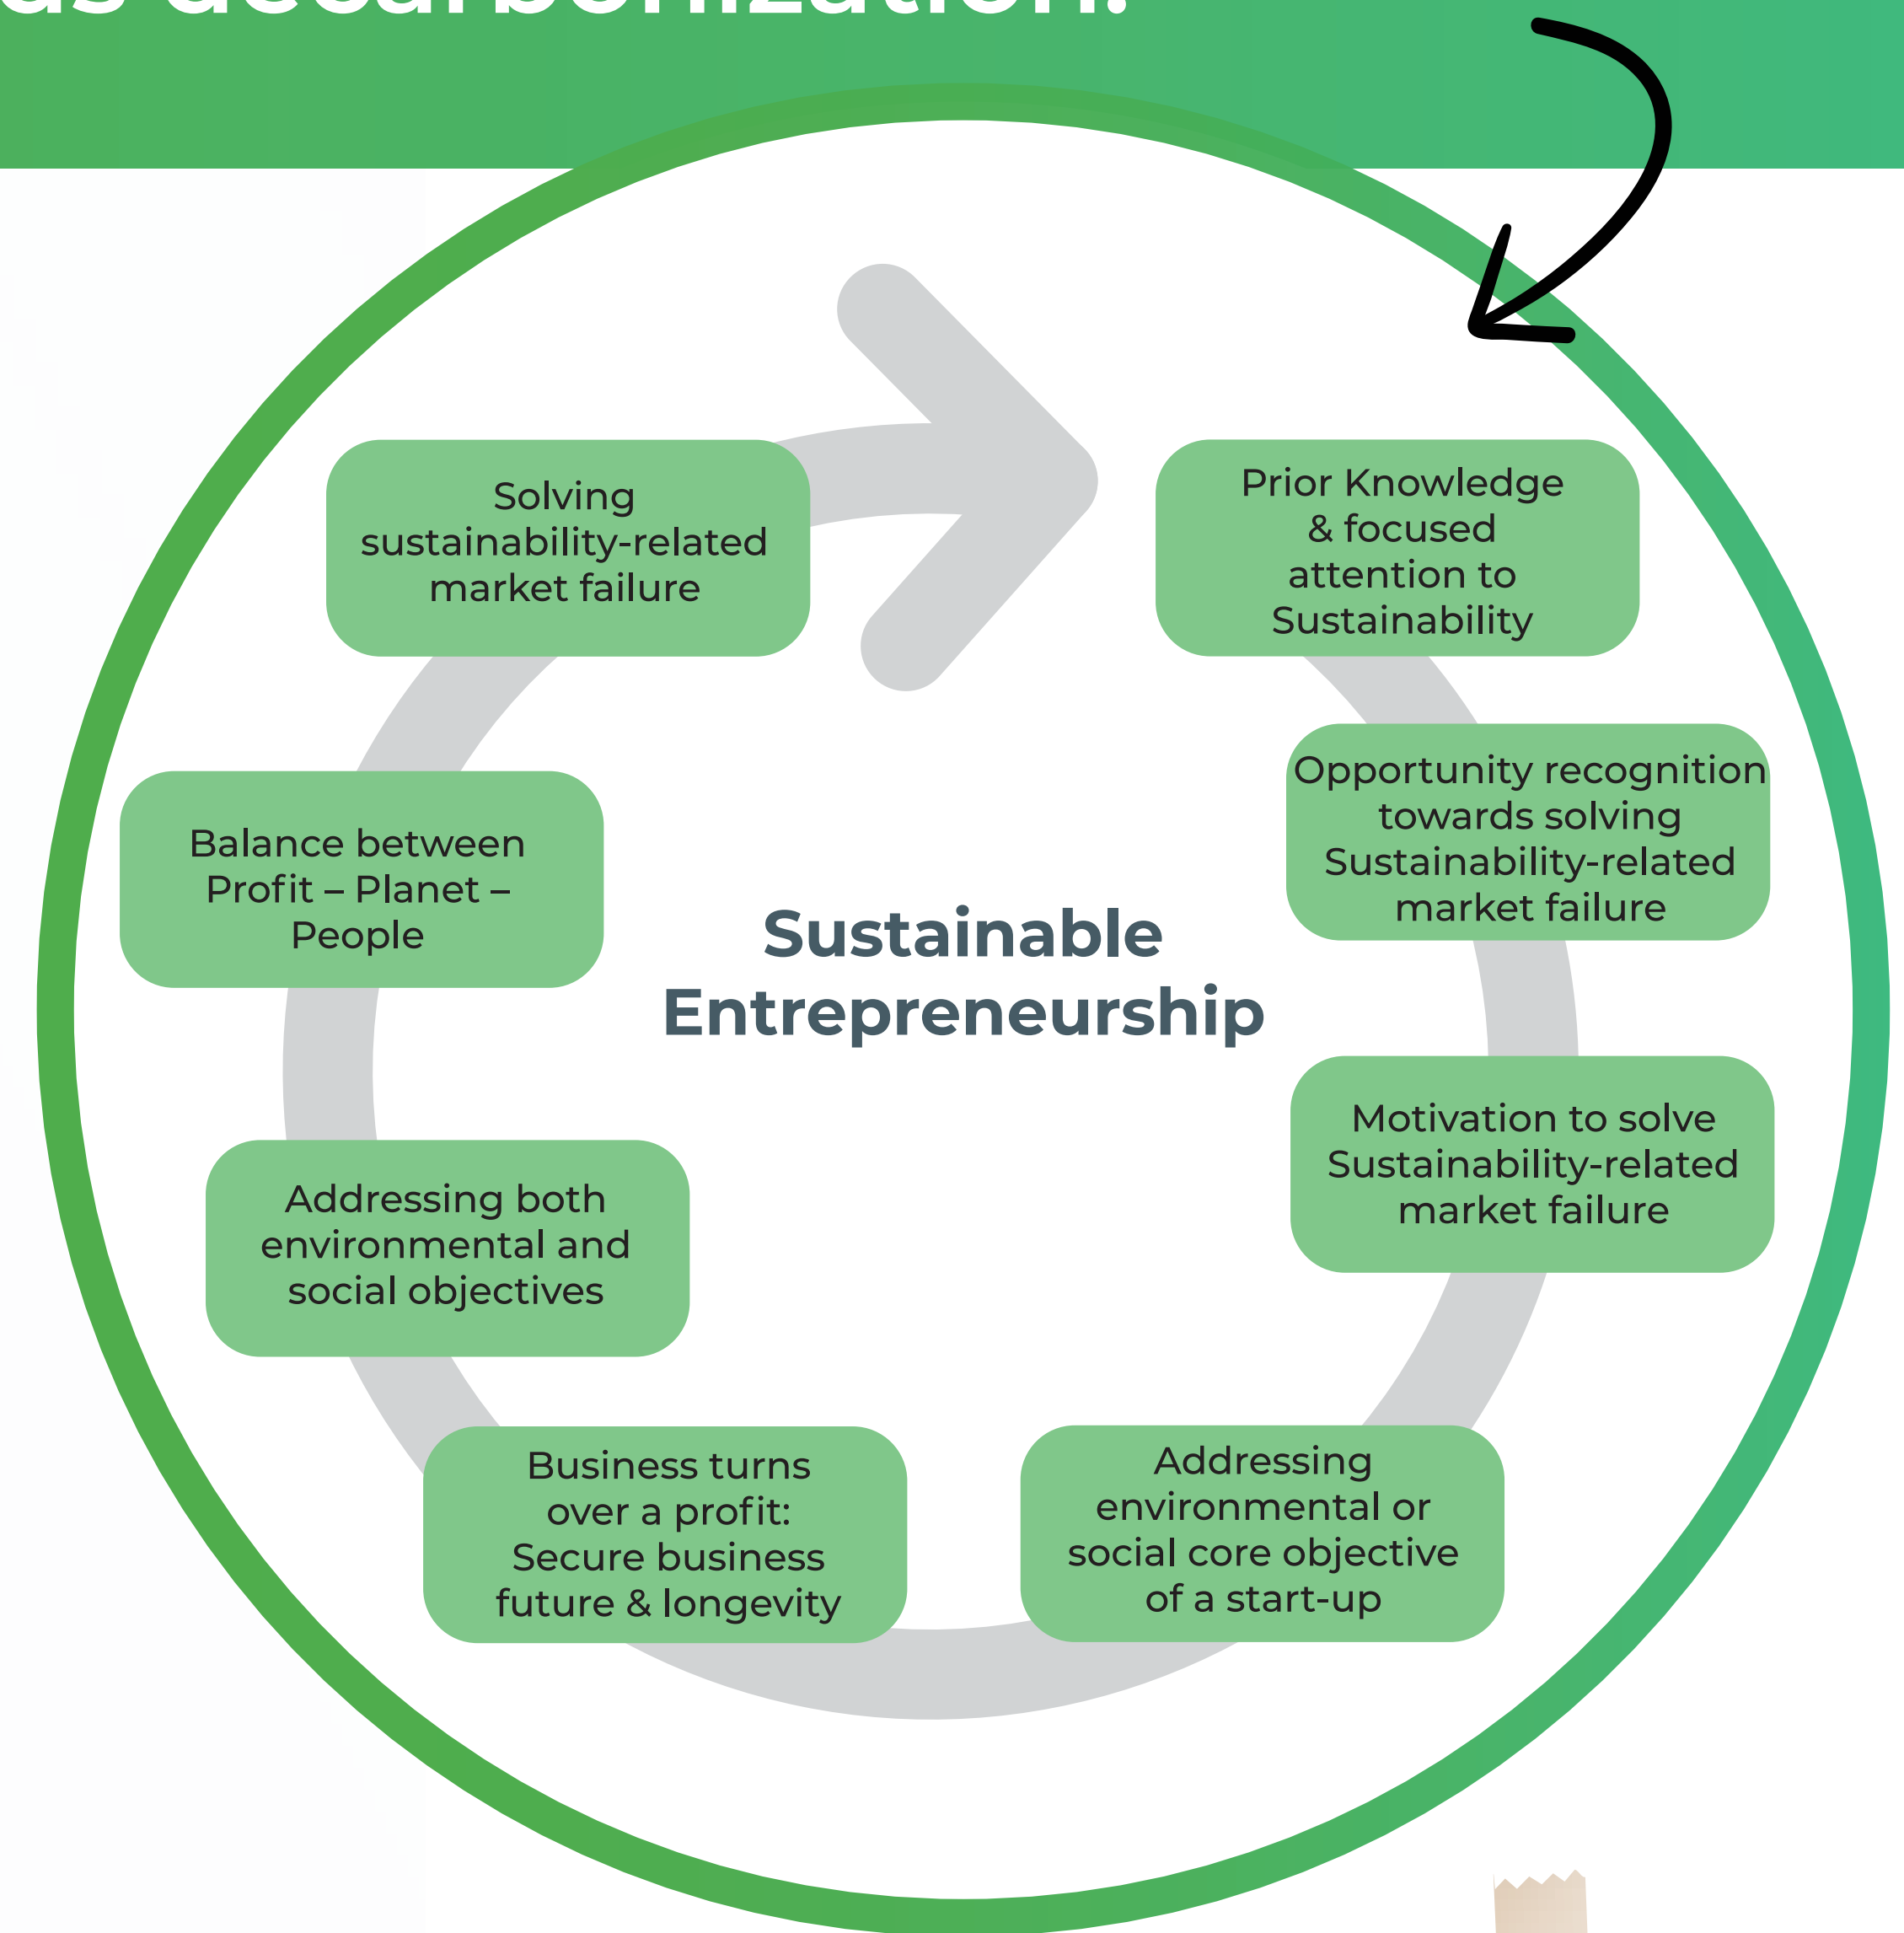

What is the Idea Behind the Project?

EntRENEW applies an interdisciplinary approach in articulating corporate, scientific, and pedagogical knowledge in renewable energy and entrepreneurship to empower European students to address challenges of Europe`s future sustainable prosperity and the transition of energy sectors towards decarbonization.

How do we do it?

The EntRENEW project has developed a trans-disciplinary HE blended-learning course in Entrepreneurship in Renewable Energy (ERE) at the intersection of entrepreneurship and technology. Designed for students in Entrepreneurship & Economics and Energy Engineering, it will be incorporated within existing Master programmes of the partner organizations.

All modules of the ERE course are adapted to the specific students` needs and to achieving specific learning objectives: developing entrepreneurial mindset, mastering sustainable business modeling skills in the RES sector, covering coaching sessions for successful start-ups.

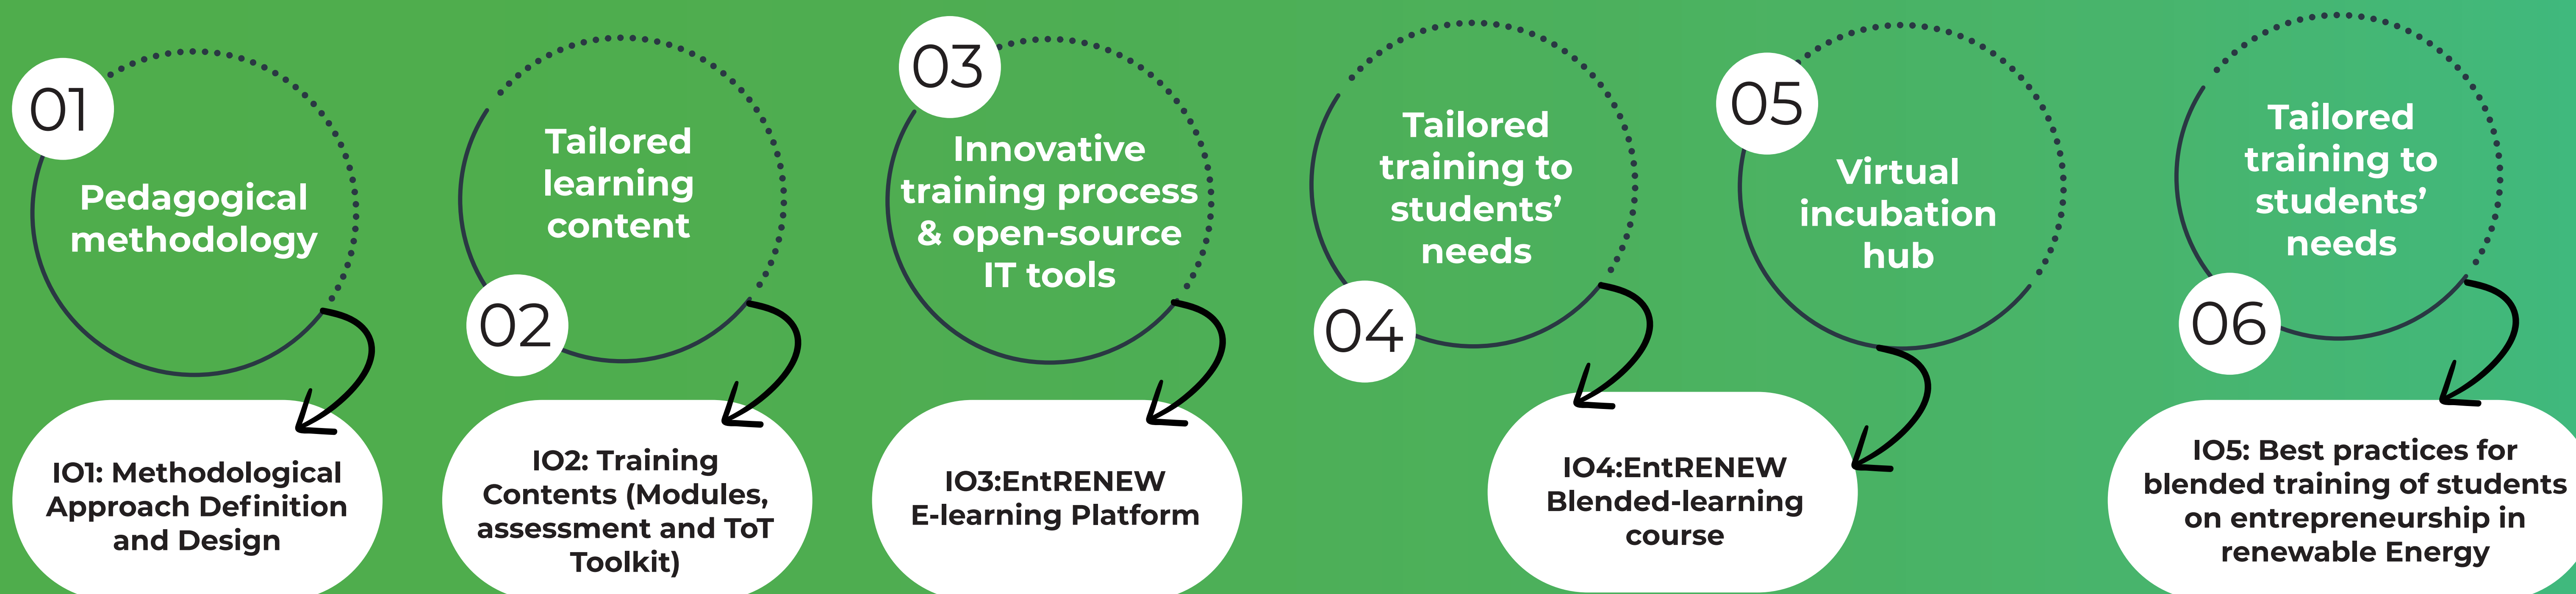

MUST KNOW

<p>Create</p> <p>A concept for a sustainable business; Change in business and personal habits; Out-of-the-box thinking</p>	<p>Evaluate</p> <p>Economic, environmental, social outcomes of sustainable business solution;</p>	<p>Analyse</p> <p>Micro-analyse other startups; Market micro-analysing;</p>	<p>Apply</p> <p>Use tools for sustainable business modelling; Business modelling and validation</p>	<p>Understand</p> <p>Renewable energy systems; Sustainable entrepreneurship;</p>	<p>Remember</p> <p>Steps to develop sustainable business; Learning from energy disasters; Sustainable business in RES; Pillars of sustainability</p>
